1. Medication History

Your central resource for accessing patient medication history across the Surescripts network.

Medication History services help you:

- Retrieve pharmacy fill data from participating pharmacies
- Retrieve medication claims data from participating PBMs
- Support medication reconciliation workflows
- Make more informed prescribing and care decisions

Documentation

[Medication History Guide](#)

Provides access to patient medication history from participating pharmacies and PBMs

[Medication History Load for Pharmacies Guide](#)

Supports submission of pharmacy dispensing data to the Surescripts network

[Medication History for Claims Data Suppliers Guide](#)

Supports submission of claims data for medication history services

[Medication History for PDMP Pharmacies Guide](#)

Supports sharing PDMP pharmacy data with the Surescripts network

How It Works (High-Level)

- Submit a medication history request
- Retrieve pharmacy fill data from participating pharmacies and claims data from participating PBMs
- Receive historical medication data for the patient
- Review medications as part of clinical and prescribing workflows
- Support medication reconciliation and care coordination efforts

Key Resources

[Access Workbench \(Staging\)](#)

Get connected to your testing environment and key implementation tools

[Message Search \(Staging\)](#)

Search for, troubleshoot and review transactions

[Certification Tester](#)

The self-driving Certification built by Surescripts to support NCPDP Standards

Standards Information

NCPDP SCRIPT Standard

Medication History utilizes the NCPDP (National Council for Prescription Drug Programs) messaging standard Prescriber/Pharmacist Interface SCRIPT version 2023011 as a baseline.

- Use official NCPDP guides for full implementation details
- Surescripts documentation highlights how those standards are applied within the network
- Official standards documentation and NCPDP membership information are available at [ncdp.org](https://www.ncdp.org)

You'll see NCPDP referenced in milestone names, descriptions, and acceptance criteria. These references indicate *which industry standard the milestone supports*, not a full list of technical requirements. Always use the official NCPDP implementation guides for detailed specifications.
