1. On-Demand Formulary 3

1. On-Demand Formulary

Documentation

[On-Demand Formulary](#)

Provides real-time coverage, cost, and alternatives via request/response.

How It Works (High-Level)

- Request formulary data
- Receive payer-specific coverage details
- Use Formulary IDs to align across eligibility and benefit workflows

Key Resources

[Access Workbench \(Staging\)](#)

Get connected to your testing environment and key implementation tools

[Message Search \(Staging\)](#)

Search for, troubleshoot, and review On-Demand Formulary transactions

[Certification Tester](#)

The self-driving Certification built by Surescripts to support NCPDP Standards

[Support](#)

Open a ticket to troubleshoot the issue

[Formulary Insights](#)

Validate, troubleshoot, and visualize formulary data

Standards Information

[NCPDP Formulary & Benefit Standard](#)

Formulary data is aligned with NCPDP standards for coverage, benefit, and alternative medication information.

- Use official NCPDP guides for full implementation details
- Surescripts documentation highlights how those standards are applied within the network
- Official standards documentation and NCPDP membership information are available at ncpdp.org

You'll see NCPDP referenced in milestone names, descriptions, and acceptance criteria. These references indicate *which industry standard the milestone supports*, not a full list of technical requirements. Always use the official NCPDP implementation guides for detailed specifications.
