1. Directory 3

1. Directory

Your central resource for accessing the tools and specifications you need to manage provider and organization records within the Surescripts Directory.

Directory services enable:

- Adding, updating, and disabling provider and organization records
 - Maintaining accurate routing information
 - Supporting healthcare provider and organization discovery
 - Facilitating secure message exchange across the Surescripts network
-

Documentation

Directory

Access documentation for managing provider and organization records in the Surescripts Directory.

How It Works (High-Level)

- Submit Directory records
 - Add, update, or disable provider and organization records
 - Maintain accurate routing information
 - Support provider and organization discovery across the Surescripts network
-

Key Resources

Access Workbench (Staging)

Get connected to your testing environment and key implementation tools

Certification Tester

The self-driving Certification built by Surescripts to support NCPDP Standards

Directory Manager

Manage your organization's data within Surescripts Staging Directory, including prescribers, pharmacies, locations, service -levels and other pertinent information

Message Search (Staging)

Search for, troubleshoot and review transactions for E-Prescribing

Support

Open a ticket to troubleshoot the issue

Standards Information

NCPDP SCRIPT Standard

Directory utilizes the NCPDP (National Council for Prescription Drug Programs) messaging standard Prescriber/Pharmacist Interface SCRIPT version 2023011 as a baseline.

- Use official NCPDP guides for full implementation details
- Surescripts documentation highlights how those standards are applied within the network
- Official standards documentation and NCPDP membership information are available at [ncdp.org](https://www.ncdp.org)

You'll see NCPDP referenced in milestone names, descriptions, and acceptance criteria. These references indicate *which industry standard the milestone supports*, not a full list of technical requirements. Always use the official NCPDP implementation guides for detailed specifications.
