3. Remove the exhaust vent package from inside the oven.

4. Take out 1 exhaust duct and 6 M4X15 stainless screws from the oven body and remove its packing.

5. Use M4 cross screwdriver to fix the exhaust duct to the oven body by M4X15 stainless screws, the installing method as shown in figure 1.

6. Continue with the ventilation installation by attaching your hosing to the top edge of the exhaust vent with a hosing clamp.

Note: It is important to fit a blast gate/damper between the oven and the main duct, if your oven experiences difficulties sustaining 220° C, try slightly closing the blast gate to prevent the ventilation from removing too much heat from the oven.
