

OVERVIEW

These release notes provide a list of changes to the Carbon DLS API, including resolved features, new features, and known issues. In this release, we have resolved and added following features:

- **Packer build prints should no longer be duplicated**
- **Build SOP profile(s) now include the optional setting to limit the max number of part(s) per build**
- **Build SOP profile(s) now include the optional setting to “Skip Auto Layout”**

You can find the entire process from generating an API key to testing your JWT token on our GitHub repository located at <https://github.com/carbon3d/carbon3d-api>.

The Carbon DLS API is provided as an OpenAPI spec ([api.yaml](#)). This spec allows you to generate client libraries in many languages. A list of supported OpenAPI generators is available [here](#).

If you have any questions and/or feedback, please contact api-list@carbon3d.com.

RESOLVED FEATURES

1. **Packer build prints should no longer be duplicated (CLP-20202, CLP-20227)**

An issue where builds were being incorrectly duplicated in printed parts has been identified and resolved.

NEW FEATURES

1. **Build SOP profile(s) now include the optional setting to limit the max number of part(s) per build (*max_build_size*) (CLP-20012)**

There is now an option to set a max number of parts per build in a Build SOP profile. This does not require an API client update.

2. **Build SOP profile(s) now include the optional setting to “Skip Auto Layout” (CLP-20011)**

The option to skip auto layout is now available in the Auto Layout options in a Build SOP profile. This does not require an API client update.

(As a reminder: the Build SOP feature is only available for PartOrder users and must be enabled by Carbon. Please contact your Carbon Technical Partner if you are interested in enabling this feature.)

KNOWN ISSUES

Please reach out to our API support group at api-list@carbon3d.com or file issues on our GitHub repository.
