

OVERVIEW

These release notes provide a list of changes to the Carbon DLS API, including resolved features and known issues. In this release, we have resolved the following features:

- **Improved error handling**

You can find the entire process from generating an API key to testing your JWT token on our GitHub repository located at <https://github.com/carbon3d/carbon3d-api>.

The Carbon DLS API is provided as an OpenAPI spec ([api.yaml](#)). This spec allows you to generate client libraries in many languages. A list of supported OpenAPI generators is available [here](#).

If you have any questions and/or feedback, please contact api-list@carbon3d.com.

RESOLVED FEATURES

1. Improved error handling (CLP-19414)

The server would previously return server error 500 for some invalid requests. You should now receive a relevant status code for client errors (e.g. 400) when invalid requests are sent (e.g. invalid application_uuid, etc.).

2. GET /printers intermittently return a server error 500 (CLP-18979)

We have identified and resolved an issue where a GET /printer request would intermittently return a server error 500.

KNOWN ISSUES

Please reach out to our API support group at api-list@carbon3d.com or file issues on our GitHub repository.
