

OVERVIEW

These release notes provide a list of changes to the Carbon DLS API, including resolved issues, new features, and known issues. In this release, we have resolved and added following feature(s):

- **Print UUID are returned in order when viewing a printer queue**

You can find the entire process from generating an API key to testing your JWT token on our GitHub repository located at <https://github.com/carbon3d/carbon3d-api>.

The Carbon DLS API is provided as an OpenAPI spec ([api.yaml](#)). This spec allows you to generate client libraries in many languages. A list of supported OpenAPI generators is available [here](#).

If you have any questions and/or feedback, please contact api-list@carbon3d.com.

RESOLVED ISSUES

1. **Print UUID (*print_uuid*) are returned in order when viewing a printer queue (*GET /printer/queues*) (CLP-21037)**

Previously, print UUIDs were returned in the order of the time the build was last updated. The print UUIDs will now be returned in the order in which they are queued on a given printer, with the first print in the queue at the top of the list.

NEW FEATURES

1. **Prints (*GET /prints*) returns print UUIDs (CLP-21017)**

The UUID (print UUID) for each print will now be added to the response payload when querying prints.

KNOWN ISSUES

Please reach out to our API support group at api-list@carbon3d.com or file issues on our GitHub repository.
