

OVERVIEW

These release notes provide a list of changes to the Carbon DLS API, including new features. In this release, we have added the following feature(s):

- **Rate limit information is now displayed in response headers**

You can find the entire process from generating an API key to testing your JWT token on our GitHub repository located at <https://github.com/carbon3d/carbon3d-api>.

The Carbon DLS API is provided as an OpenAPI spec ([api.yaml](#)). This spec allows you to generate client libraries in many languages. A list of supported OpenAPI generators is available [here](#).

If you have any questions and/or feedback, please contact api-list@carbon3d.com.

NEW FEATURES

1. Rate limit information is now displayed in response headers (CLP-17794)

Rate limit information will now be displayed in the response header for all valid requests. When the rate limit threshold is reached, a 429 response ("Too Many Requests") will be displayed.

X-RateLimit-Limit displays the current rate limit, X-RateLimit-Remaining displays the remaining requests before the rate limit threshold is reached, and X-RateLimit-Reset displays when the rate limit will reset (specified in UTC epoch time, in seconds).

KNOWN ISSUES

Please reach out to our API support group at api-list@carbon3d.com or file issues on our GitHub repository.
