

OVERVIEW

These release notes provide a list of changes to the Carbon DLS API, including resolved issues, new features, and coming soon. In this release, we have fixed the following features:

- A small number of printed parts would return error 500 when querying **GET /printed_parts**

You can find the entire process from generating an API key to testing your JWT token on our API repo located at <https://github.com/carbon3d/carbon3d-api>.

The Carbon DLS API is provided as an OpenAPI spec ([api.yaml](#)). This spec allows you to generate client libraries in many languages. A list of supported OpenAPI generators is available [here](#).

If you have any questions and/or feedback, please contact api-list@carbon3d.com.

RESOLVED ISSUES

1. Printed Parts (*GET /printed_parts*) returns error 500 (CLP-16213)

A small number of printed parts created before April would return error 500 when queried.

2. Prints (*GET /prints*) will return prints without a Build UUID (CLP-16444)

Prints that lack a Build UUID (e.g. when reprinting) should now be properly displayed when the print is queried.

KNOWN ISSUES

Please reach out to our API support group at api-list@carbon3d.com or file issues on our GitHub repo.

COMING SOON

The following will be implemented in an upcoming release:

- Ability to query Queued Prints (CLP-16041)
- Added query parameters to Printed Parts (*GET /printed_parts*) (CLP-16043)
- Added information to Printed Parts when a part with holes has been repaired (CLP-16239)
