

OVERVIEW

These release notes provide a list of changes to the Carbon DLS API, including resolved features, new features, and known issues. In this release, we have resolved and added following features:

- **Packing Groups that are finished will no longer count towards the limit in Part Orders**
- **The automatic packer now supports parts from multiple catalog builds**

You can find the entire process from generating an API key to testing your JWT token on our GitHub repository located at <https://github.com/carbon3d/carbon3d-api>.

The Carbon DLS API is provided as an OpenAPI spec ([api.yaml](#)). This spec allows you to generate client libraries in many languages. A list of supported OpenAPI generators is available [here](#).

If you have any questions and/or feedback, please contact api-list@carbon3d.com.

RESOLVED FEATURES

1. **Packing Groups that are finished will no longer count towards the limit in Part Orders (CLP-20178)**

We have resolved an issue where Packing Groups were being counted against the limit regardless of their Part Order status. Packing Groups will now only be counted in Part Orders that are not finished (complete, canceled, etc.).

NEW FEATURES

1. **The automatic packer now supports parts from multiple catalog builds (CLP-19804)**

When submitting multiple parts from the same application UUID, they can be processed in the same build if all submitted parts include the same BuildSOP UUID. No changes have been made to other part submission combinations.

KNOWN ISSUES

Please reach out to our API support group at api-list@carbon3d.com or file issues on our GitHub repository.
