

OVERVIEW

These release notes provide a list of changes to the Carbon DLS API, including resolved issues, new features, and known issues. In this release, we have resolved and added following feature(s):

- **Better error messages when an expired token is used**
- **Server responses to Queued Prints now include Build UUID**
- **Build UUID has been added as a parameter in Prints**

You can find the entire process from generating an API key to testing your JWT token on our GitHub repository located at <https://github.com/carbon3d/carbon3d-api>.

The Carbon DLS API is provided as an OpenAPI spec ([api.yaml](#)). This spec allows you to generate client libraries in many languages. A list of supported OpenAPI generators is available [here](#).

If you have any questions and/or feedback, please contact api-list@carbon3d.com.

RESOLVED ISSUES

1. **Better error messages when an expired token is used (CLP-20913, CLP-20914)**

The server would previously return a generic error message when an expired token was used. The error message will now inform the user that their token is expired.

NEW FEATURES

1. **Server responses to Queued Prints (*GET /printers/queues*) now include Build UUID (*build_uuid*) (CLP-20979)**

The Build UUID should appear when querying Queued Prints. Note: this requires the parameter status=queued.

2. **Build UUID (*build_uuid*) has been added as a parameter in Prints (*GET /prints*) (CLP-20979)**

Prints now include the option to search by Build UUID.

KNOWN ISSUES

Please reach out to our API support group at api-list@carbon3d.com or file issues on our GitHub repository.
