

OVERVIEW

These release notes provide a list of changes to the Carbon DLS API, including resolved features, coming soon, and known issues. In this release, we have added the following features:

- **Parts and Model section has been added to the Catalog Parts page**
- **Part Order information added to the Queues page**

You can find the entire process from generating an API key to testing your JWT token on our GitHub repository located at <https://github.com/carbon3d/carbon3d-api>.

The Carbon DLS API is provided as an OpenAPI spec ([api.yaml](#)). This spec allows you to generate client libraries in many languages. A list of supported OpenAPI generators is available [here](#).

If you have any questions and/or feedback, please contact api-list@carbon3d.com.

NEW FEATURES

1. Parts and Models section has been added to the Catalog Parts page (CLP-16636)

We have enabled users to see the models and parts that are created through the API in the Carbon dashboard. In addition, users can directly upload and download models from this page. For users that have multiple applications, you can change the application in the upper left corner of the page.

This feature will be released to all customers who utilize the Part Order functionality. The Carbon UI will be updated with the weekly Carbon dashboard UI that is scheduled for release April 20.

2. Part Order information added to the Queues page (CLP-19555)

To enable PartOrder users to manually manage the queue, we have added information of the PartOrder(s) (including Packing Group, PartOrder number, Due Date, and PartOrder UUID) to the right hand sidebar of the queues page. To access this information, click on the build in the queue, and the relevant information will be shown in the right hand sidebar.

KNOWN ISSUES

- We are continuing to look into the issue where *GET /printers* intermittently return a server error 500 (CLP-18979)

Please reach out to our API support group at api-list@carbon3d.com or file issues on our GitHub repository.
