

OVERVIEW

These release notes provide a list of changes to the Carbon DLS API, including resolved issues. In this release, we have resolved and added following feature(s):

- **Automatic packer timeout duration increased to 300 seconds (5 minutes) from 80 seconds**

You can find the entire process from generating an API key to testing your JWT token on our GitHub repository located at <https://github.com/carbon3d/carbon3d-api>.

The Carbon DLS API is provided as an OpenAPI spec ([api.yaml](#)). This spec allows you to generate client libraries in many languages. A list of supported OpenAPI generators is available [here](#).

If you have any questions and/or feedback, please contact api-list@carbon3d.com.

RESOLVED ISSUES

1. **Automatic packer timeout increased to 300 seconds (5 minutes) from 80 seconds (CLP-21192)**

To prevent the automatic packer from timing out when processing complex parts, the timeout was increased to 300 seconds. This will not have an impact on the build generation time when typical STLs are submitted.

KNOWN ISSUES

Please reach out to our API support group at api-list@carbon3d.com or file issues on our GitHub repository.
